

I wish to congratulate you for the formation of Indian Muslims for Progress and Reforms. It is an honour for me to introduce myself Professor Irfan Zaheer Khan(Professor of Medicinal Chemistry), at the University of Maiduguri, Nigeria. This is my observation I want to share with you first if muslim parents are not educated let them educate themselves and after that they should educate their children. We should always promote scientific education because today's need is artificial intelligence, robotics, atomization, nanotechnology, space technology, drone technology, biometric recognition technology,finger print scanning technologies, software/hardware, remote sensing technology,IR, UV and VGA graphics in computer technology. Today China is superior because of Space technology and electromagnetic frequency it is not by volume but by quality. Today it will be virtual frequency war. India is no match to Space technology. We must know that we are in digital age where smartphones are our necessities. Anyway promote scientific education with today's skill and demand. All muslim parents should not compromise on quality of skilled scientific education.Also don't ignore your children's slightest misguidance from education and please we shouldn't use our personal, political contacts or sources to promote our child by manipulating in their education, if they fail, let them fail and improve by hard work. Muslims are world's biggest and strongest population (1.8 billion roughly). All we need is to identify and explore ourselves. Our victory and success is in our SKILL, KNOWLEDGE AND CREATIVITY,and nothing els. What makes a community developed and prosperous. The obvious indicators Education and creation of wealth. The real wealth of a community lies in classrooms and laboratories not in banks. Muslims must go for inclusive education the philosophy behind is that every needy muslim child has to be provided with comparable high tech education of today's requirements.Let education is given in his or her environment,culture, or her/his own space,location. Education should be inclusive.

THERE IS ALWAYS CHANCE OF IMPROVEMENT PROVIDED WE ARE READY TO CHANGE OUR ATTITUDE IN GENERAL.

Irfan Khan
